## Instructions for the connection of transformer counters

In the case of cross-section reduction, a short-circuit resistant cable is required for the power supply of terminal 2, depending on the fusing for phases L1, L2, L3. A fuse of 6 A is recommended for the line protection.

Direct connection 63 A, 3-wire circuit

Direct connection 63 A, 1-phase

Current transformers must not be operated with open terminals as dangerously high voltages can occur, which may result in personal injuries and property damage. It may also lead to a thermal overload of the transformers.
