<b>Rated short-circuit breaking capacity</b>	For rated short-circuit breaking capacity see table under "Overview".							
acc. to IEC 60947-2								

1) Circuit breaker cannot be used for direct current.

2) Rated DC data apply only for thermal-magnetic overcurrent trip units.

3) On request.

<b>Trip units</b>								
Group 1: VL160X to VL400								
<b>Undervoltage trip unit</b>								
Response voltage:								
Release (circuit breaker is tripped)	V 0.35 ... 0.70 $\times U_s$							
Pick-up (circuit breaker can be closed)	V 0.85 ... 1.1 $\times U_s$							
Power consumption (continuous duty) at:								
AC 50/60 Hz 24 V	VA 1.4							
AC 50/60 Hz 110-127 V	VA 1.0							
AC 50/60 Hz 220-250 V	VA 1.0							
AC 50/60 Hz 208 V	VA 1.0							
AC 50/60 Hz 277 V	VA 1.0							
AC 50/60 Hz 380-415 V	VA 1.0							
AC 50/60 Hz 440-480 V	VA 1.0							
AC 50/60 Hz 500-525 V	VA 1.0							
AC 50/60 Hz 600 V	VA 1.0							
12 V DC	W 0.8							
24 V DC	W 0.8							
48 V DC	W 0.8							
60 V DC	W 0.8							
110-127 V DC	W 0.8							
220-250 V DC	W 0.8							
Max. opening time	ms 50							
<b>Shunt trip unit</b>								
Response voltage:		$U_s$						
Pick-up (circuit breaker is tripped)	V 0.7-1.1							
Power consumption ( <b>short time</b> ) at:								
AC 50/60 Hz 24 V	VA 310							
AC 50/60 Hz 48-60 V	VA 335 ... 465							
AC 50/60 Hz 110-127 V	VA 470 ... 630							
AC 50/60 Hz 208-277 V	VA 585 ... 1000							
AC 50/60 Hz 380-600 V	VA 180 ... 500							
24 V DC	W 360							
48-60 V DC	W 380 ... 590							
110-127 V DC	W 506 ... 680							
220-250 V DC	W 470 ... 580							
Max. opening time	ms 50							
Max. duration of operational voltage	s	Interrupts automatically, less than 10 ms						
<b>Time-delay device for undervoltage trip unit</b>								
Rated control supply voltage $U_s$	V AC/DC 220 ... 250							
Control voltage for undervoltage trip unit	V DC 220 ... 250							
Conductor cross-sections								
Finely stranded with end sleeve	mm <sup>2</sup> 2 × (0.5 ... 1.5)							
Solid	mm <sup>2</sup> 2 × (0.5 ... 1.5)							
Delay time/connection	s 3/-							
Undervoltage trip units	s 6/Bridge Y2-Y1							
Undervoltage trip unit and auxiliary relay (3RH11)	s 0.6/-							
	s 1.2/Bridge Y2-Y1							

<sup>1)</sup> Max. DC rated operational voltage 125 V, minimum load 50 mA at 5 V DC.

x Available

-- Not available

<sup>1)</sup> Changeover contact also permissible, note dead times between ON and OFF commands.

## Space requirements above arc chutes

### Arcing spaces

Minimum clearances from adjacent grounded parts and from non-insulated live parts.

Plain conductors and busbars must be insulated with interphase barriers within the arcing space.

The specific mounting instructions for the various sizes must be observed for plain conductors and busbars outside the arcing space.

For mounting instructions and manual refer to the Internet

[Manual for the SENTRON 3VL circuit breaker](#)

This manual contains additional technical information, covering a product description, mode of operation, electrical wiring system and retrofitting.

The manual and operating instructions are available in PDF format at:

<http://www.siemens.com/lowvoltage/manuals>

<b>VL1600</b>	<b>Standard High Very high</b>	0.264	100	100	100	100	30	100

Definition of the permissible safety clearances

Clearance between

A: Circuit breaker and busbars (bare metal and grounded metal); terminal cover required above 600 V AC, 500 V DC

B: Circuit breaker connection and floor

C: Side of the circuit breaker and the side panels (bare metal and grounded metal)

D: Circuit breaker and non-conducting parts with an insulation thickness of at least 3 mm (insulator, insulated busbar, painted plate)

### Correlation between short-circuit making capacity, short-circuit breaking capacity and the corresponding power factor (according to IEC 60947-2)

Short-circuit breaking capacity $I_{cu}$	Power factor	Minimum value for short-circuit making capacity $I_{cm}$ (n x short-circuit breaking capacity)
A	p.f.	$n \times I_{cu}$
4 500 < $I_{cu}$ ≤ 6 000	0.7	1.5 × $I_{cu}$
6 000 < $I_{cu}$ ≤ 10 000	0.5	1.7 × $I_{cu}$
10 000 < $I_{cu}$ ≤ 20 000	0.3	2.0 × $I_{cu}$
20 000 < $I_{cu}$ ≤ 50 000	0.25	2.1 × $I_{cu}$
50 000 < $I_{cu}$	0.2	2.2 × $I_{cu}$

e.g. VL250H (H ≡ high switching capacity):  $I_{cu} = 70$  kA (415 V AC)

$I_{cm} = 2.2 \times 70\,000 = 154$  kA (415 V AC)
